

TradingAI Current System Architecture

Complete post-M78 visual multi-view edition

Production intelligence, M78 Setup Intelligence, portfolio/execution, research boundaries, LaunchAgent topology, effective-market-date lineage and physical macOS deployment.

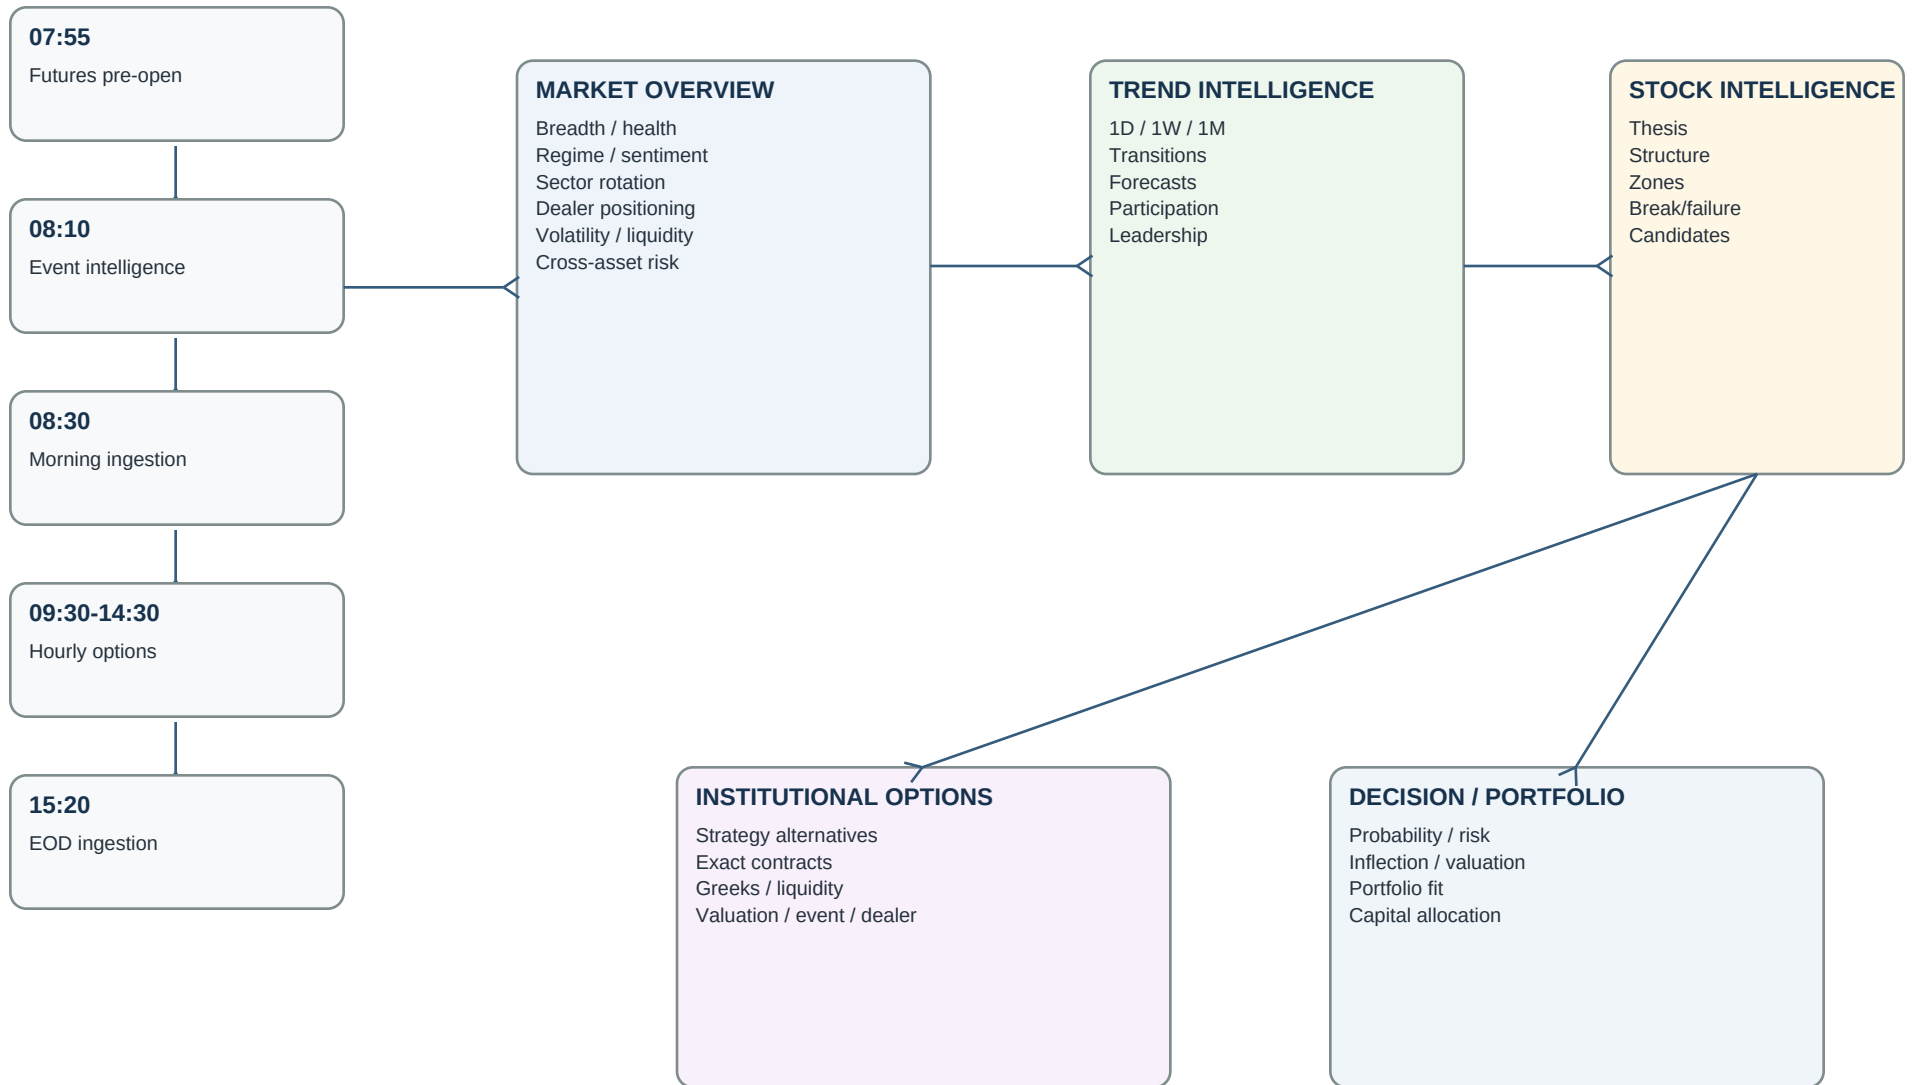

1. End-to-End Authority Chain

Production flow with M78 shadow branch

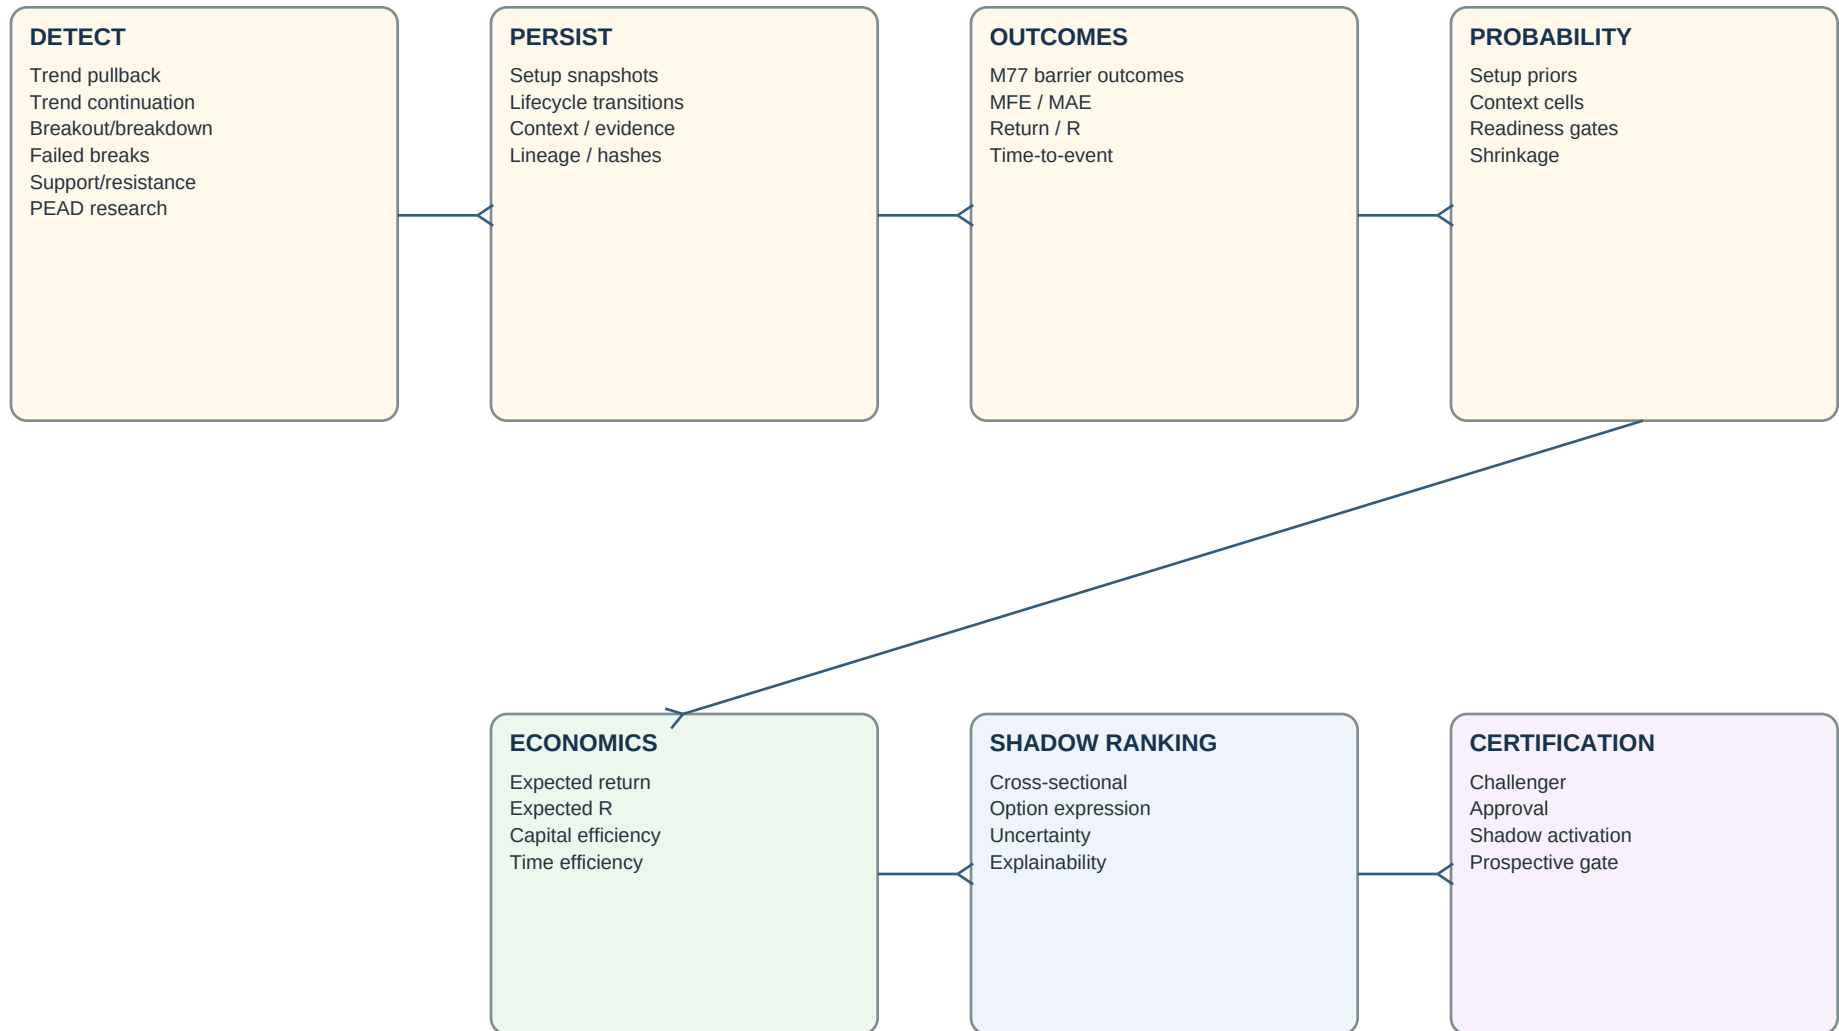

2. Market Data and Intelligence Plane

Weekday ingestion -> market -> trend -> stock -> downstream intelligence

3. Milestone 78 - Setup Intelligence

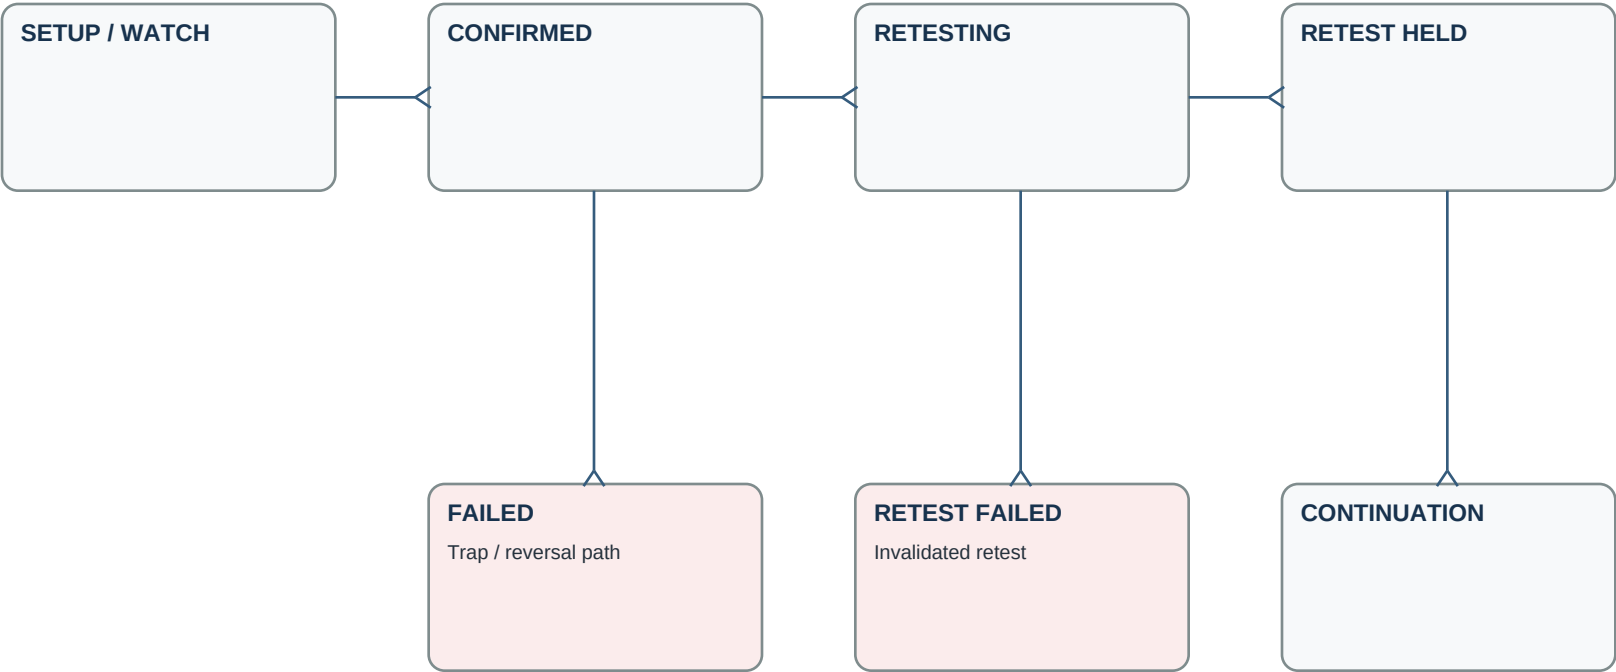

Explicit setup identity -> outcomes -> probability -> economics -> certification

NO AUTOMATIC PRODUCTION AUTHORITY TRANSFER

4. Setup Lifecycle State Machine

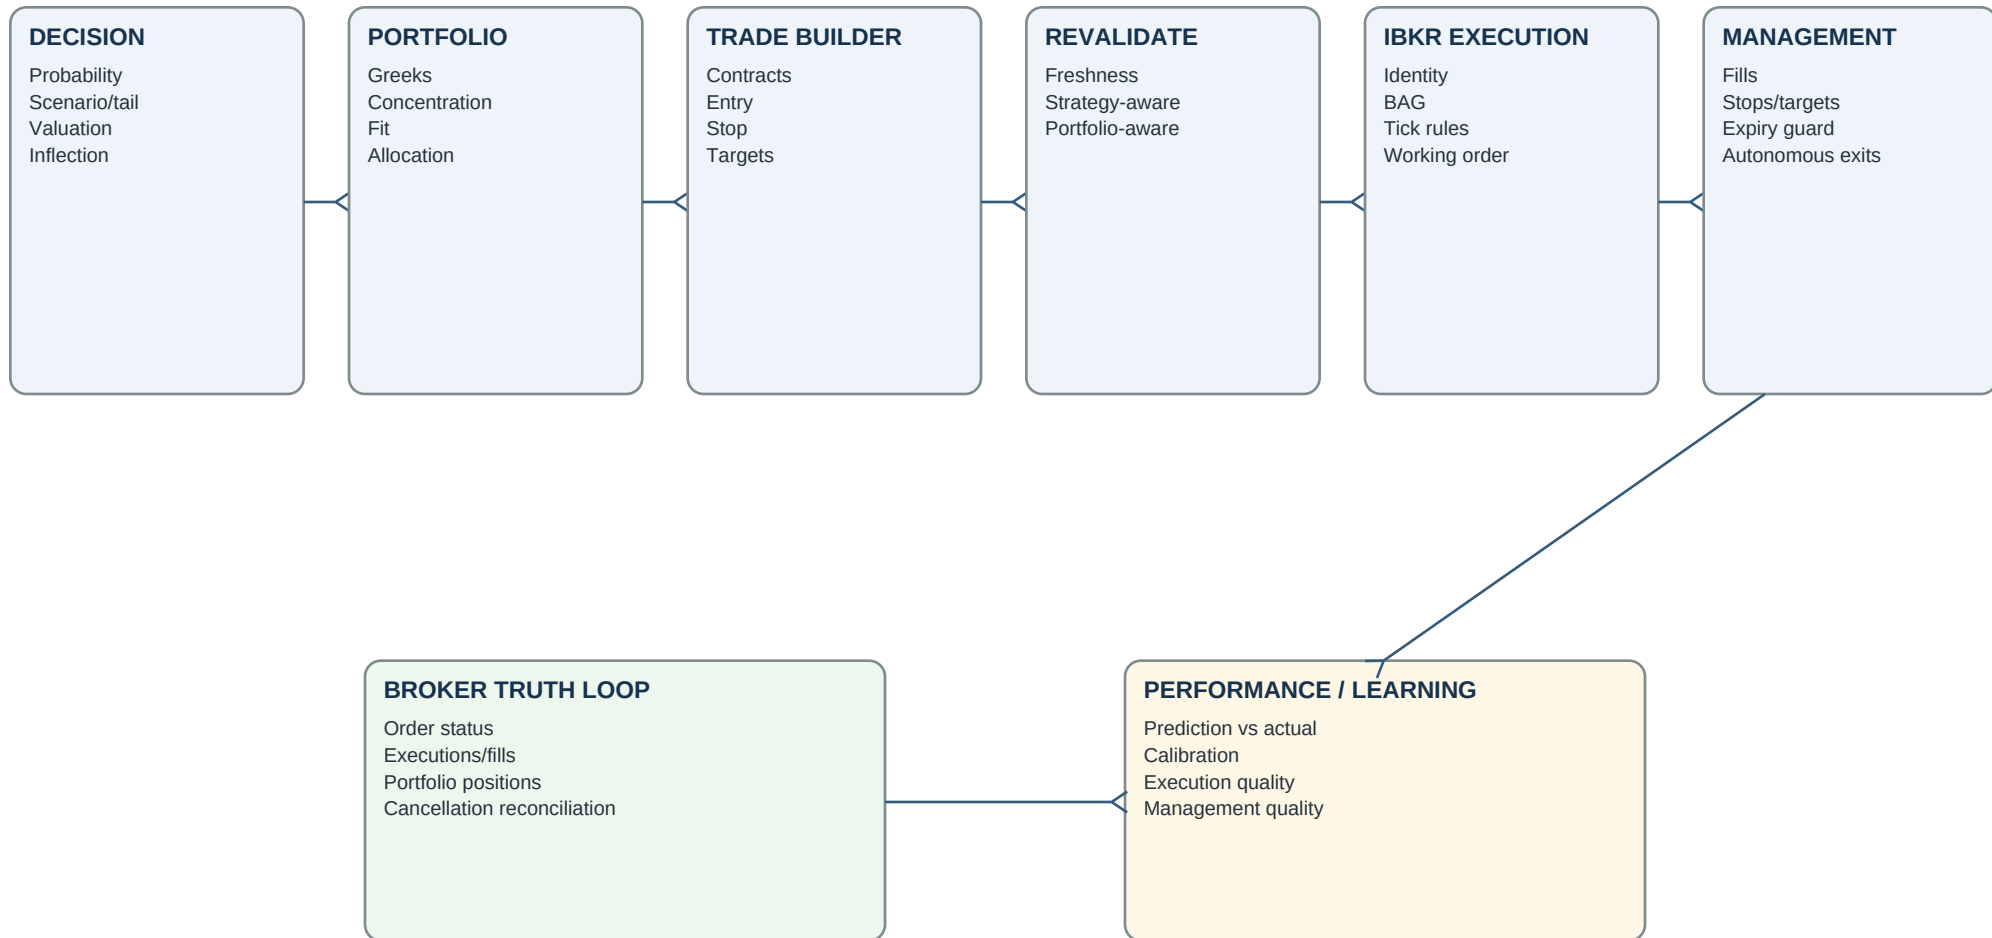

Idempotent lifecycle transition persistence

First observation -> transition; state change -> transition; unchanged state -> no artificial transition.

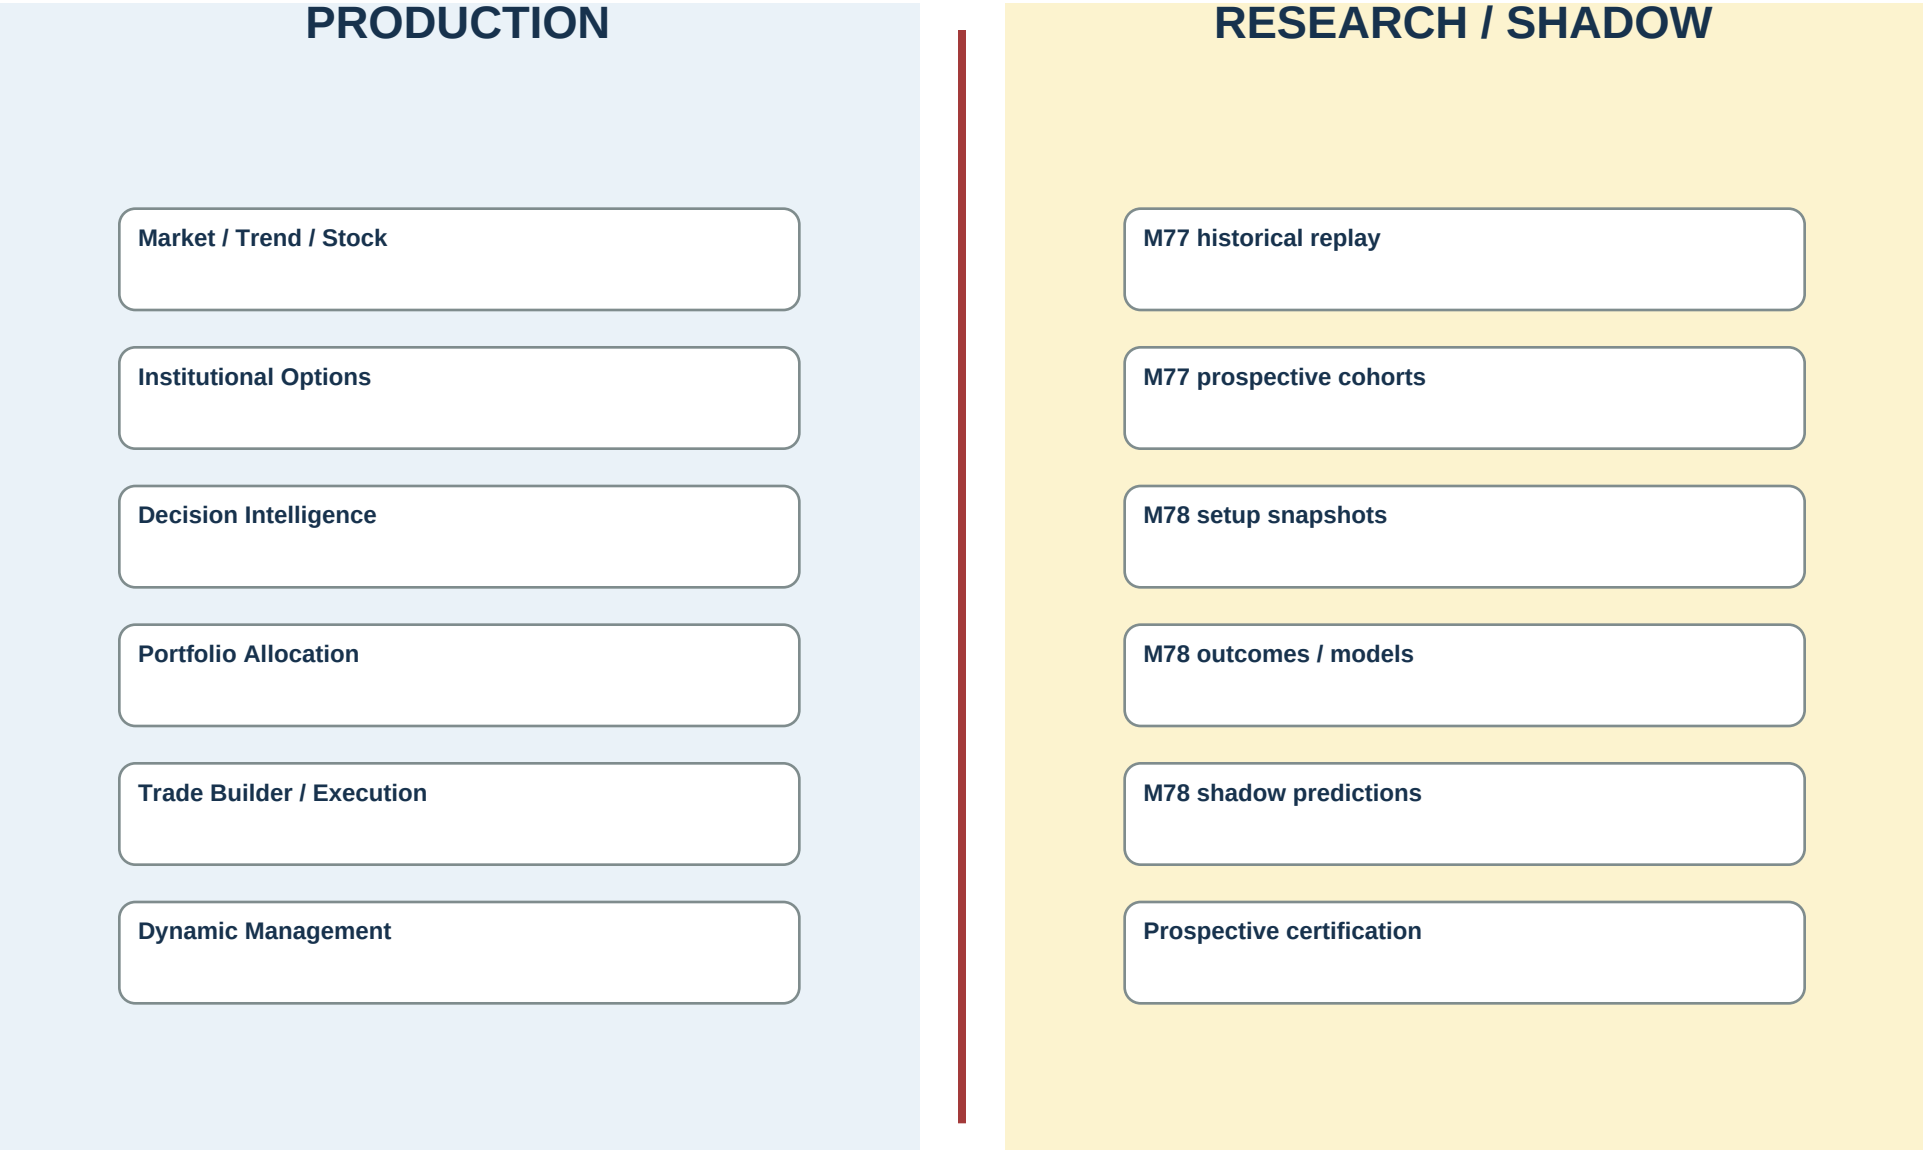

5. Decision -> Portfolio -> Execution -> Management

Production authority path

6. Production vs Research / Shadow Boundary

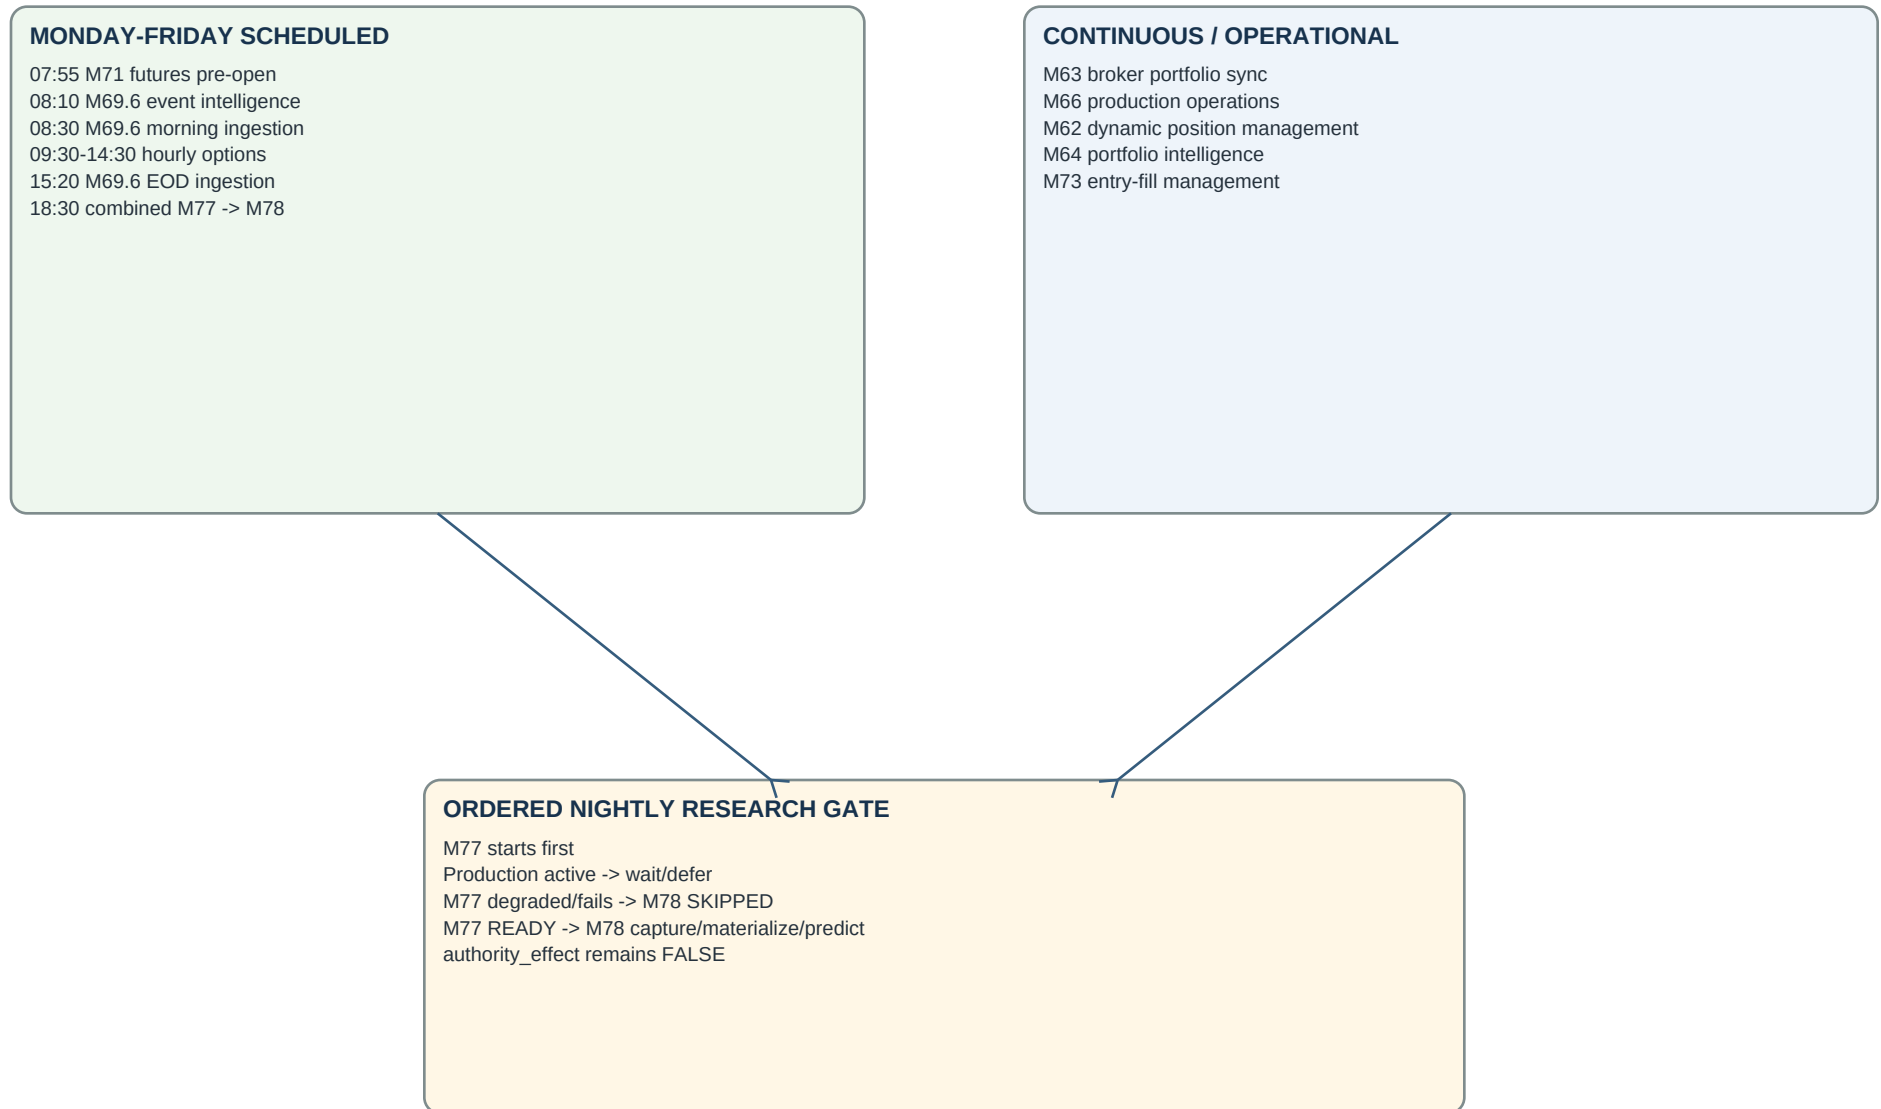

Explicit governance separates research evidence from production authority

EXPLICIT GOVERNANCE REQUIRED FOR PROMOTION

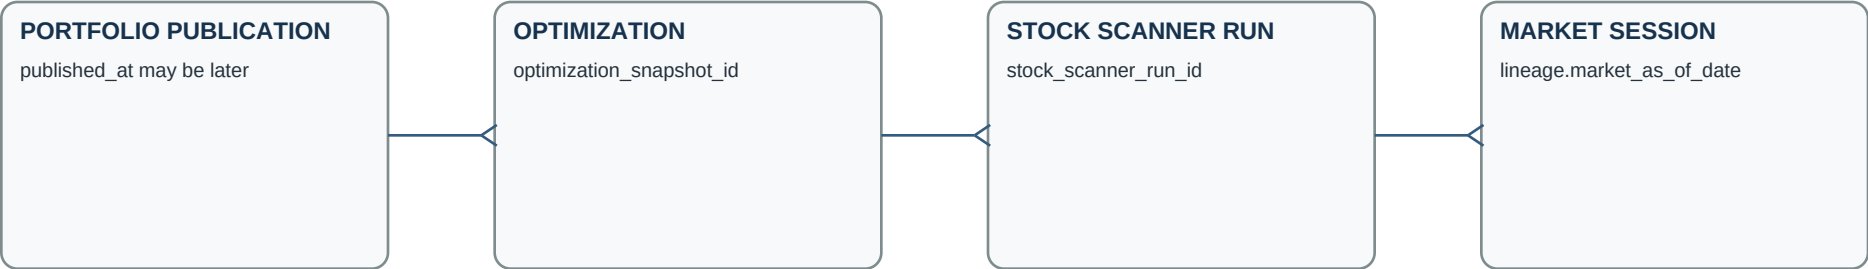

7. macOS LaunchAgent Topology

Weekday schedules vs continuous operational services

8. Effective Market-Date Lineage

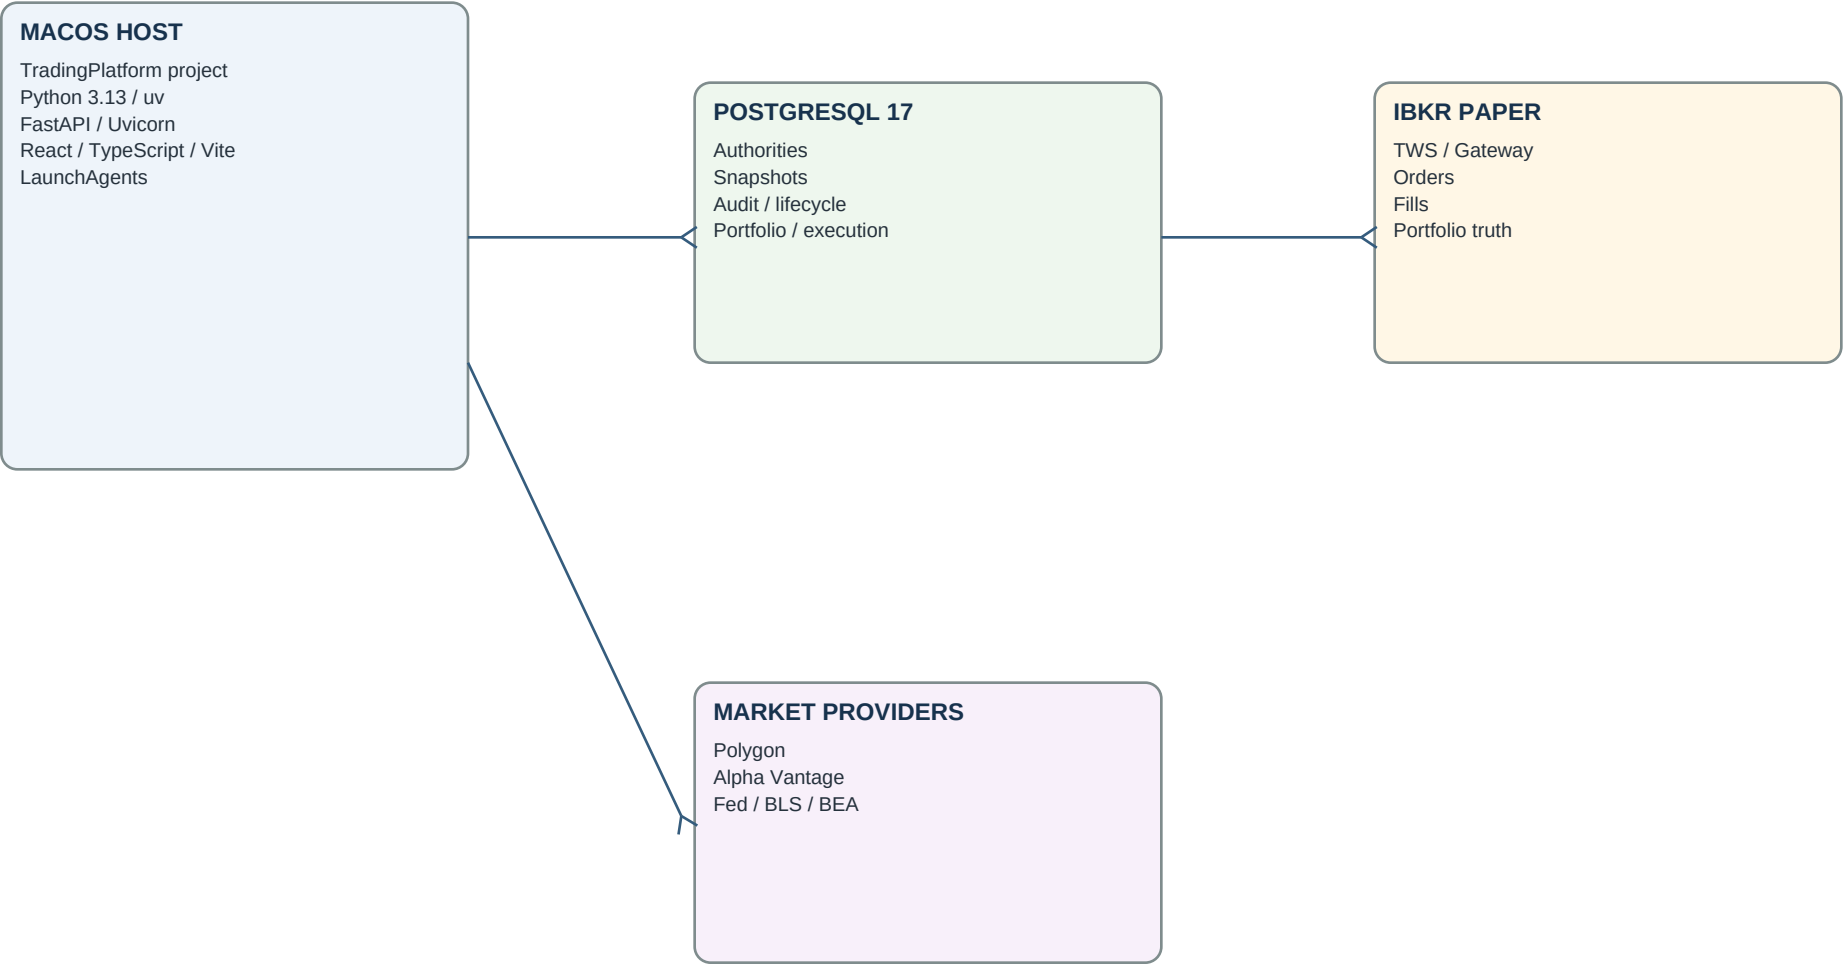

Processing time is not market-session authority

OBSERVED WEEKEND EXAMPLE
CPRE market date: 2026-08-28
Stock Intelligence market_as_of_date: 2026-08-28
Portfolio publication processed: 2026-08-29
Same-market authority VALID; published_at is diagnostic metadata

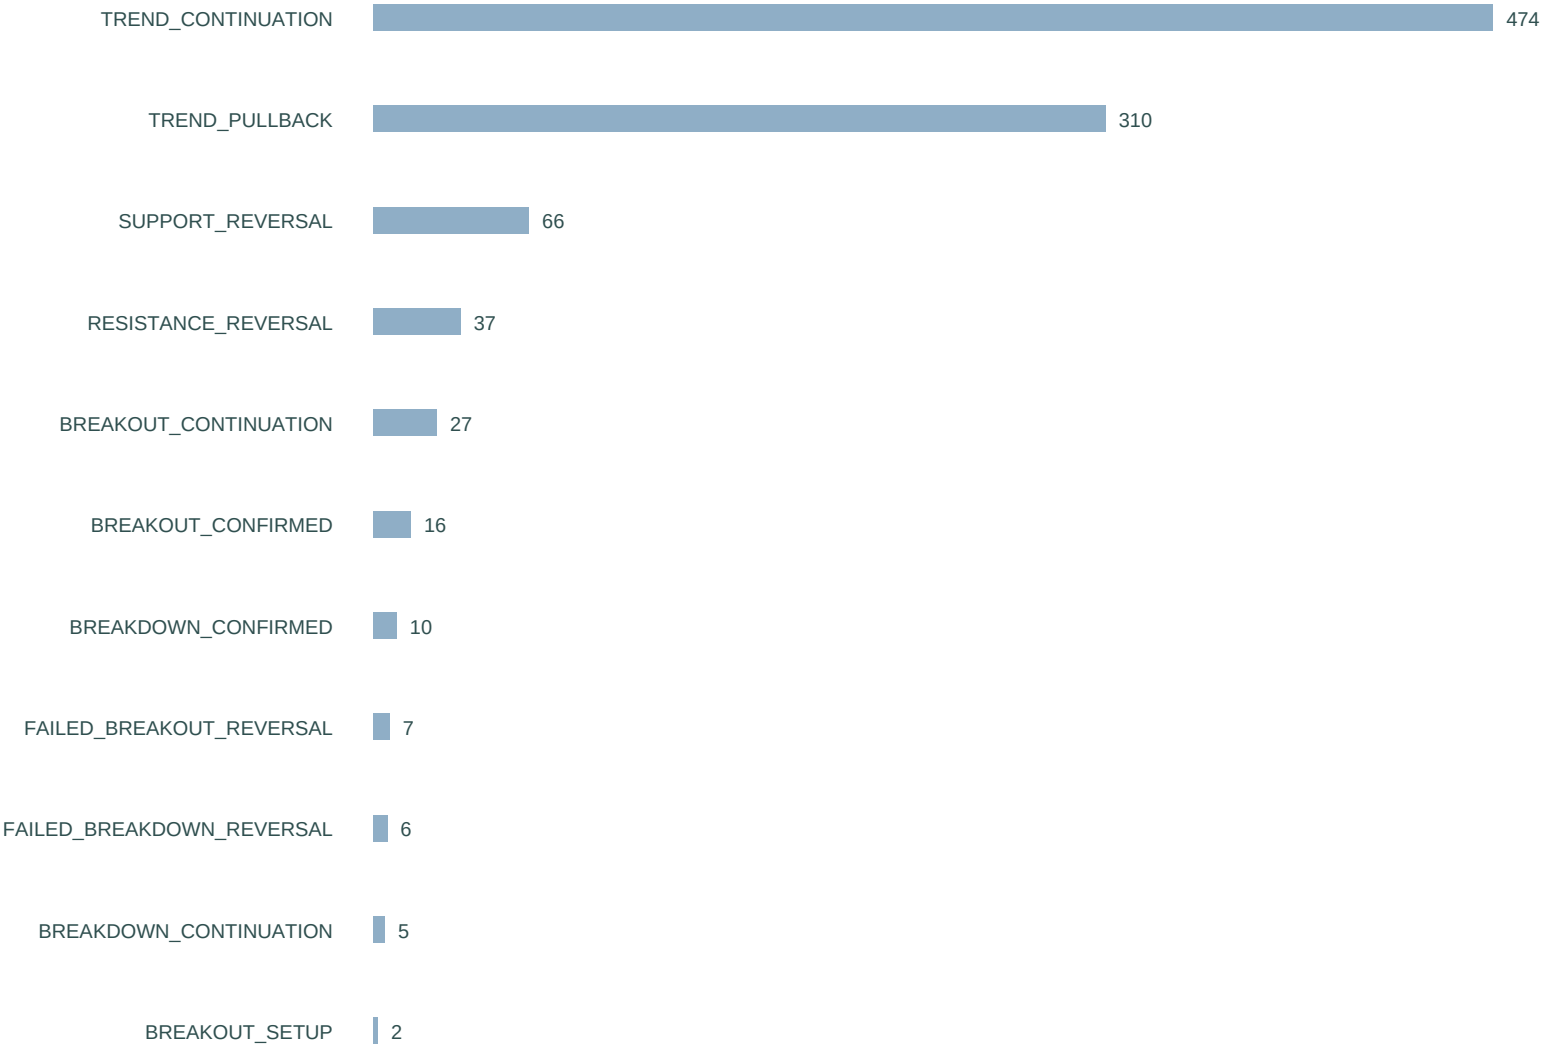

9. Physical Deployment on macOS

Processes, persistence and external connectivity

10. Observed M78 Setup Population

First successful post-install capture

614 candidates -> 960 setup snapshots. Outcomes insufficient; no active M78 shadow model.
